LeedeRNG

Coated Webbing - LedeRNG™ is basically a synthetic coating applied on polyester tapes. PVC coated webbing is made up of a woven base fabric (normally polyester), a bonding or adhesive agent, and exterior PVC coatings. PVC Coated webbing has excellent strength, durability and weather resistant properties. The process not only improves the strength of the polyester tapes but also enhances the aesthetics. Our product is designed to look and feel like leather, but is more durable, more cleanable, and more waterproof than leather.

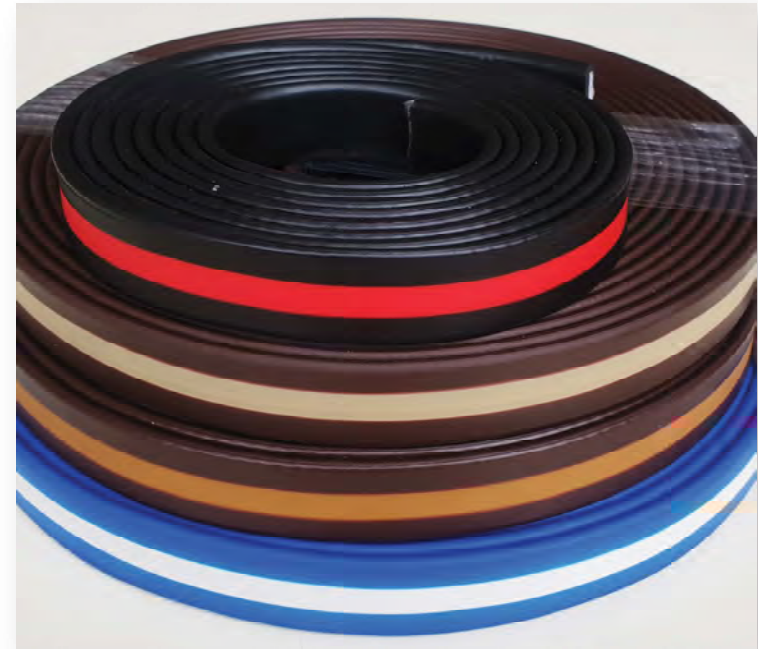

Our products have gone through and passed the stringest testing processes that have been set up to determine the highest standards in terms of quality and sustainability. These tests were carried out by the following independent testing agencies of international repute and accreditations:

- Intertek
- SGS
- Spectro
